### PROFESSIONAL SUMMARY

Medior/Senior Frontend Engineer focused on React, TypeScript, Next.js, design systems, testing, and performance. Builds production product UI for multi-tenant platforms and delivers end-to-end web/mobile projects across freelance and side-product work. Experienced with UI architecture, API integration, TanStack Query and Zustand data flows, accessibility, responsive UX, Playwright/Vitest/React Testing Library/MSW coverage, and scalable monorepos. Also builds team-level agentic workflow tooling for documentation, Playwright testing, and AI-assisted delivery. Currently building GreenState product interfaces for 20,000+ active users across Europe.

### CORE SKILLS

Frontend: React, Next.js, TypeScript, JavaScript ES6+, HTML5, CSS3, Tailwind CSS, Radix UI, Styled Components, Storybook, Framer Motion, GSAP, responsive design, accessibility, SEO.

State and data: TanStack Query, Zustand, Axios, REST APIs, GraphQL API consumption, caching, pagination, token refresh, request orchestration, role-based access control, localization, React Hook Form, Zod.

Testing: Vitest, React Testing Library, MSW, Playwright, automated browser checks, regression testing, API-mocked tests, test planning.

Tooling and platforms: Git, GitHub, Docker local development, Vite, npm package workflows, Sanity CMS, Resend, Supabase, Neon PostgreSQL, Drizzle ORM, Prisma-backed API contracts.

Mobile and AI workflows: React Native, Expo, Google Play closed testing, AI-assisted development, Codex/LLM workflows, agentic workflow design, prompt engineering, automated technical documentation.

### PROFESSIONAL EXPERIENCE

#### Frontend Developer | GreenState AG | Novi Sad, Serbia | Aug 2025 - Present

- Build and maintain production features for a large multi-tenant React/TypeScript platform serving 20,000+ active users across Europe.
- Own frontend delivery end to end: UI architecture, responsive product flows, REST API integration, localization, role-based access control, forms and validation, edge cases, QA support, and release follow-up.
- Initiated frontend testing where no frontend tests existed before, using Vitest, React Testing Library, MSW, and Playwright for unit, integration, API-mocked, and browser-level regression tests; critical UI coverage is approaching 70%.
- Initiated design-system migration from Styled Components and Storybook 8 to Radix UI, Tailwind CSS, and Storybook 10 after Styled Components entered maintenance mode, using a strangler approach so legacy and new systems coexist safely in the monorepo.
- Build reusable Storybook components across variants, responsive states, loading states, empty states, error states, and accessibility considerations.
- Manage data-heavy screens with TanStack Query, Zustand, Axios interceptors, caching, pagination, token refresh, request orchestration, retry handling, and Prisma-backed API contracts.
- Use AI-assisted development workflows for implementation planning, edge-case discovery, test scenarios, refactoring support, UX copy iteration, and Playwright-driven regression ideas while keeping review and verification engineer-owned.
- Created the ClickMind Agentic Workflow plugin for the GreenState team, unifying agentic engineering practices across monorepos and standardizing AI-assisted documentation, Playwright testing workflows, implementation planning, review, and verification.

#### Freelance Frontend & Full Stack Engineer | Self-Employed | 2023 - Present

- Delivered React, Next.js, and React Native/Expo projects from scope and technical planning through implementation, API/CMS integration, deployment or release prep, testing, and post-launch iteration.
- Built content-driven and marketing websites with Next.js, TypeScript, Tailwind CSS, Sanity CMS, Framer Motion, GSAP, Resend, SEO-focused structure, and Lighthouse-oriented quality checks.
- Built mobile-first app experiences including Sveznalica and PSFM Diet Tracker with React Native/Expo, reusable forms, product-focused screens, Android build/testing flow, and Google Play closed testing preparation.

- Built an AI-powered analytics frontend for the XState app, enhancing e-commerce insights through React and GraphQL integration.
- Used Supabase/Neon PostgreSQL, Drizzle ORM, Sanity CMS, email integrations, and generated-document workflows such as dynamic PDF catalog output.
- Applied Codex/LLM workflows for implementation planning, debugging, UX iteration, test scaffolding, and faster review of edge cases across client and side projects.

### **UX/UI Developer Intern | Vega IT | Novi Sad, Serbia | Aug 2023**

- Completed a frontend/UI internship focused on HTML5, CSS, JavaScript, UI implementation, responsive layouts, and collaborative delivery.

## **SELECTED PROJECTS**

- Amadea Catering Website - Website: <https://www.amadea.rs/> - Next.js, React, Tailwind CSS, animation, SEO, and Lighthouse-focused performance for a premium prepared-meals/catering brand.
- Agile Onion - Website: <https://www.agileonion.rs/> - Next.js, Sanity CMS, Framer Motion, and Resend email integration for a CMS-driven website with responsive layout, smooth interactions, and reliable contact form delivery.
- Autokola Drive Team - Website: <https://www.autokoladt.rs/> - Next.js, TypeScript, Tailwind CSS, and Framer Motion website with registration/contact flow, pricing sections, accessibility, and mobile-first UX.
- Pejovic Invest - Website: <https://www.pejovic-invest.rs/> - Next.js, TypeScript, Sanity CMS, and Framer Motion website with structured project showcases, animated transitions, and editor-friendly content workflows.
- Pro-Deco.rs - Website: <https://www.pro-deco.rs/> - Next.js website with SEO-focused product categories, visual galleries, responsive layouts, and a dynamically generated PDF catalogue.
- Superpowers Architecture - GitHub: <https://github.com/NenadBanjevlav/superpowers-architecture> - Public architecture-first AI coding workflow for Codex and Claude Code with written context, specs, plans, TDD, reviews, and verification.
- ClickMind Agentic Workflow Plugin - Internal GreenState team tooling: Team plugin modeled on Superpowers Architecture that unified agentic engineering workflows across GreenState monorepos, improved AI-assisted documentation, and standardized Playwright testing, implementation planning, review, and verification practices.

## **CERTIFICATIONS**

- Master.dev / Frontend Masters: Playwright: Automated Testing & AI Workflows, Jun 2026.
- Master.dev / Frontend Masters: A Tour of JavaScript & React Patterns, Feb 2026.
- Master.dev / Frontend Masters: Front-End System Design, Jan 2026.
- Master.dev / Frontend Masters: Testing Fundamentals, Dec 2025.
- Master.dev / Frontend Masters: React Performance, v2, Dec 2025.
- Master.dev / Frontend Masters: Cursor & Claude Code: Professional AI Setup, Jan 2026.
- Udemy: Create and publish your own tree-shakable NPM packages, Sep 2025.

## **EDUCATION**

### **Faculty of Sport - TIMS | Bachelor's degree, Physical Education and Sport | 2014**
